27 Abstract

One or two sentences providing a basic introduction to the field, comprehensible to a
scientist in any discipline. Two to three sentences of more detailed background,
comprehensible to scientists in related disciplines. One sentence clearly stating the general
problem being addressed by this particular study. One sentence summarizing the main
result (with the words "here we show" or their equivalent). Two or three sentences
explaining what the main result reveals in direct comparison to what was thought to be
the case previously, or how the main result adds to previous knowledge. One or two
sentences to put the results into a more general context. Two or three sentences to
provide a broader perspective, readily comprehensible to a scientist in any discipline.

Data from ManyDogs 1

9 (1) Background

38

ManyDogs is a research consortium of teams worldwide interested in shared research 40 questions about canine science (ManyDogs Project et al., 2023a). This consortium actively 41 fosters a dynamic and diverse community and formalize a transparent and equitable process 42 for proposing and engaging in multi-lab collaborative projects related to canine cognition and behavior. In the first ManyDogs study named ManyDogs1 (ManyDogs Project et al., 2023b), we investigated a question of theoretical importance in canine science: Do dogs act on human pointing signals as though they are communicative social cues? Domestic dogs (Canis familiaris) have become a popular animal model for investigations of cognitive evolution and behavior, particularly after they appeared to respond to human communicative cues such as pointing in a way that was more accurate and flexible than other species (e.g., Bräuer et al., 2006). Though point following behavior in dogs has been widely observed and the subject of scientific study by many over recent decades (Miklösi et 51 al., 1998; Soproni et al., 2001; Hare et al., 2002; Kaminski & Nitzschner, 2013), there is still disagreement as to why dogs are following pointing cues. Is it because they interpret human pointing as socially communicative (CITE)? Or is it because dogs have learned to associate human pointing with food rewards (e.g., Wynne et al., 2008)? 55 To investigate this question, we used a big team science single-study approach, 56 modeling other groups such as ManyBabies (Frank et al., 2017) and ManyPrimates 57 (ManyPrimates et al., 2019). With this method, multiple research groups followed the same experimental protocol, sharing the high cost of behavioral data collection and striving to implement the method in an identical manner. Under our main hypothesis, we predicted that when dogs saw a pointing gesture 61 paired with ostensive signals such as eye gaze and dog-directed speech (i.e., calling the

dog's name), they would be more likely to follow the gesture than when no such ostensive

cues accompanied the point. If we observed this response across dogs, the result would lend support to the idea that explicitly communicative cues help dogs understand the intention behind the gesture, or that they find ostensive cues necessary for understanding pointing, similar to human children (Behne et al., 2005). On the other hand, if no difference was observed in point following across the two conditions (Ostensive vs Non-Ostensive), this result would suggest that dogs indiscriminately follow pointing, perhaps because they have learned to associate it with rewards and not due to understanding the communicative intention underlying the gesture.

In addition to testing our main hypothesis, we took the opportunity offered by
multiple labs collaborating on the same study to collect data on sources of inter-lab
variability that could influence results. Often, studies by different groups produce
inconsistent results (Rodriguez et al., 2021). The impact of cultural differences in scientific
practice, dog training norms across regions, and of course variation in heritable traits
across dog breeds have complicated replication studies carried out by isolated groups,
making it difficult to pinpoint the reasons that results differ. By collecting as much
information about the testing environments and subject population as we were practically
able, we ended up with a rich and robust data set that would support investigation about
multiple influences on dogs' behavior previously out of reach.

82 (2) Methods

2.1 Study design

Please describe the overall study design as requested here. This section is
not about surveys but general study characteristics. Provide a clear overview of the
study design. This should involve broader features, for example whether the data is
cross-sectional or longitudinal, from online questionnaires or face-to-face interviews. A
clear overview of the central foci and variables of the data should be presented, including

89 differentiation of between- and within-participant dimensions wherever relevant.

The survey with demographic information and C-BARQ trainability questionnaire 90 was translated in n. Languages and administered through an Internet link provided to all 91 researchers involved. Questionnaire was administered to dog owners and guardians prior to 92 participate in the behavioral study. The survey was their dog's demographics, handler 93 demographics, household information, dog communication information, training history, research experience and then we have the training, aggression, fear, and separation related 95 behavior, excitability, attachment, and attention seeking, and miscellaneous which are chasing, chewing, begging, pulling, urinating activity, barking, licking, and things like that 97 and our point following behavior. We used social media platforms to spread an open call to pet owners and guardians on a study and used emails lists to advertise the project. We used C-BARQ questionnaire for collecting information from pet guardians about 100 themselves and their dogs. With the help from the platform github and google forms we 101 were able to collect the data from participants and store it in github for future analysis. 102

2.2 Time of data collection

104

Data were collected between Jan 2022 and Jan 2023 across all research sites.

2.3 Location of data collection

Data were collected in 20 research sites across nine countries (Argentina, Canada,
Croatia, Czech Republic, Hungary, Italy, Poland, UK, USA) on three continents (Figure 1).
A full list and description of research sites is available in Table S1 of ManyDogs Project et
al. (2023b).

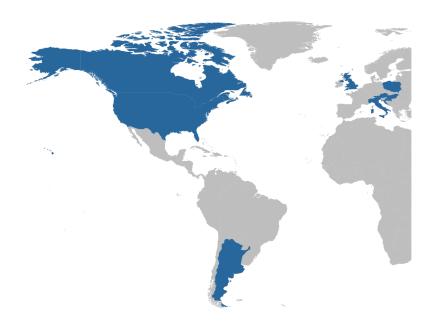

Figure 1. ManyDogs1 was conducted in 20 research sites in nine countries: Argentina, Canada, Croatia, Czech Republic, Hungary, Italy, Poland, UK, USA.

2.4 Sampling, sample and data collection

Across all 20 research sites, teams behaviorally tested 704 dogs (M:F = 334:373, mean \pm SD age = 4.40 \pm 3.1 years [range = 0.3-20.8]). Approximately 76.9% of the dogs were spayed or neutered, 53.8% were purebred (comprising 85 breeds), and 90.2% lived in private homes, 9.6% lived in group/kennel housing, and 0.3% lived in other housing. Complete behavioral data were collected from 455 dogs, and complete survey data were collected from 495 dogs. Guardians identified as female (81.0%), male (17.7%), and nonbinary/other (1.3%) with a modal guardian age range of 30 - 39 years.

2.5 Materials/Survey instruments

Please describe all survey instruments as requested here. This should
describe all materials in the survey for the complete dataset provided here (not
just the MD1 dataset). Describe the study materials, constructs measured, stimuli,
number of items, participant instructions, and, if applicable, factors in the experimental

design. Here, a high level of detail is expected to allow replication, and links to stored copies
of the exact materials used are expected (unless under copyright or other such restriction).

completed a survey on their dog's background, including breed, training history, and
other demographics. They also completed the trainability scale of the Canine Behavioral
Assessment and Research Questionnaire (C-BARQ©, www.cbarq.org)(Hsu and Serpell,
2003).

29 2.6 Quality control

Please describe the quality control components as requested here. As it states below, describe pilot study, first session video checks, reliability checks, etc. Please list the methods used for quality control in the production of the data. This could include pilot work, attention checks, quality checks (e.g. reliability estimates), lab logs, item non-response management, etc.

2.7 Data anonymisation and ethical issues

Each research site participating in this study provided approval from their respective institutional ethics committee (see Table S1 of ManyDogs Project et al., 2023b). All participants gave informed consent to participate and were free to discontinue from the study when wanted.

All identifiable information has been removed from the dataset, including replacing dog names with dog ID numbers.

2 2.8 Existing use of data

A portion of the guardian data collected for the ManyDogs 1 study were used and published in:

ManyDogs Project, Espinosa, J., Stevens, J. R., Alberghina, D., Always, H. E. E.,
Barela, J. D., Bogese, M., Bray, E. E., Buchsbaum, D., Byosiere, S-E., Byrne, M., Cavalli,
C. M., Chaudoir, L. M., Collins-Pisano, C., DeBoer, H. J., Douglas, L. E. L. C., Dror, S.,
Dzik, M. V., Ferguson, B., ... Zylberfuden, S. G. (2023). ManyDogs 1: A multi-lab
replication study of dogs' pointing comprehension. *Animal Behavior and Cognition*, 10(3),
232-286. https://doi.org/10.26451/abc.10.03.03.2023

(3) Dataset description and access

151

The data set contains 704 observations of 158 variables described in Table 1. The 152 dataset contains variables supplied by a questionnaire as well as experimental variables. 153 Data provided by each dog's guardian include demographic information about the dog and 154 guardian, responses to questions about the types and frequencies of the dog's training 155 activities, and answers to the Canine Behavior and Research Questionnaire (C-BARQ, 156 Serpell & Hsu, 2001; Hsu & Serpell, 2003). The first eight questions of the C-BARQ concern trainability, and their answers were used as part of the preregistered analysis of 158 pointing (ManyDogs Project et al., 2023b). After answering the C-BARQ trainability 159 questions, guardians could optout of completing the rest of the C-BARQ questions. 160 In addition to the data provided by guardians, experimental variables are included in 161 this data set. These include information about experimental conditions, proportions of correct choices under ostensive and nonostensive conditions and nonostensive conditions, 163 whether the correct and chosen option were on the right side of the dog, and whether the 164 subject completed the experiment and was used in the analysis. 165

3.1 Repository location

The dataset for this study is available on the Open Science Framework at https://osf.io/????? (DOI: https://doi.org/????) and on GitHub at

https://github.com/ManyDogsProject/????.

3.2 Object/file name

The file name for the dataset is manydogs_etal_2024_data.csv and the codebook is manydogs_etal_2024_codebook.csv.

3.3 Data type

This dataset includes processed data from the ManyDogs1 project. We have removed identifiable information, recoded data values for consistency, renamed and reordered columns for clarity, and combined survey data submitted by guardians via Qualtrics and behavioral data submitted by research teams via Qualtrics.

3.4 Format names and versions

The dataset and codebook are provided in a comma-separated (.csv) plain text format. There is one version of the dataset with no anticipated additional versions as data collection has ended.

$_{182}$ 3.5 Language

The variable names and text values are in English. Though data were collected in other languages (Croatian, Czech, Hungarian, Italian, Polish, and Spanish), the Qualtrics surveys were coded to save responses in English.

3.6 License

187

The ManyDogs 1 dataset is available under a CC??? license.

3.7 Limits to sharing

The dataset is freely available for download on the Open Science Framework. There are no limits to sharing beyond those described in the license.

3.8 Publication date

192

The dataset was uploaded to the Open Science Frame work on

93 3.9 FAIR data/Codebook

This dataset is *findable* through the persistent identifier on the Open Science
Framework (), *accessible* through free availability on OSF and GitHub, *interoperable* by
using plain-text CSV data files, and *reusable* with the ??? license. Metadata are included
as codebook here (Table 1) and with the data on OSF and Git Hub.

198 (4) Reuse potential

The original data from ManyDogs 1 (ManyDogs Project et al., 2023b) focuses on dog 199 responses in the two-alternative object choice task across warmup, ostenstive, 200 non-ostenstive, and odor control trials. In addition, that dataset includes basic 201 demographics on the dog and handler, as well as the mean training score from the 202 C-BARQ. The current dataset adds information on dog origin and household, dog training 203 experience, handler communication practices, and the complete C-BARQ profile. The C-BARQ data in particular are quite rich, with sections on training, aggression, fear, separate-related behavior, excitability, attachment and attention seeking, and 206 miscellaneous problem behaviors. Thus, this dataset allows for assessing correlations 207 among all of the C-BARQ measures as well as connections to the experimental task data 208 and the other dog and handler characteristic data. 209

A key strength of this data set is its diversity. The data were collected by 20 different research sites in nine countries, allowing the assessment of site effects as well as cultural differences. In addition, while most dogs are kept in private homes, the dataset also includes a subset of dogs kept in group housing at working dog facilities. Finally, when appropriate, breed is included, allowing the exploration of breed differences.

Though the current dataset has expanded survey information about dog and handler 215 characteristics, the behavioral task data has been summarized at the level of mean choices 216 per subject and experimental condition rather than including individual trial data. Thus, 217 the trial data are not available for analysis in the current dataset. However, the trial data 218 are available in the original dataset, so it is possible to merge the current and original 219 datasets using subject ID as the primary key to gain access to the trial data. An additional limitation is that, though the C-BARQ training survey questions were compulsory for all 221 participants, the remaining questions were optional to ease the survey burden. As a result 512 of the 704 guardians elected to continue on to the optional questions (though not all completed the survey). 224

225 Contribution Statement

Please list all contributions towards this manuscript, including the contributions of all individuals who helped to collect the data (who may also not be an author of the data paper), including their roles and affiliations at the time of data collection.

The authors made the following contributions. Julia Espinosa: Conceptualization,
Data curation, Formal analysis, Funding acquisition, Methodology, Project administration,
Supervision, Writing - original draft, Writing - review & editing; Elizabeth Hare:

		while your dog is outside or in the yard.	aggression, High aggression, Serious
			aggression, NA
	cbarq_aggression_13	When an unfamiliar person tries to touch	No aggression, Mild aggression, Moderate
		or pet the dog.	aggression, High aggression, Serious
			aggression, NA
	cbarq_aggression_14	When joggers, cyclists, rollerbladers or	No aggression, Mild aggression, Moderate
		skateboarders pass your home while your	aggression, High aggression, Serious
		dog is outside or in the yard.	aggression, NA

Table 1

Category of Variable	Variable Name	Question Text	Possible Response Values
	cbarq_aggression_15	When approached directly by an	No aggression, Mild aggression, Moderate
		unfamiliar male dog while being	aggression, High aggression, Serious
		walked/exercised on a leash	aggression, NA
	cbarq_aggression_16	When approached directly by an	No aggression, Mild aggression, Moderate
		unfamiliar female dog while being	aggression, High aggression, Serious
		walked/exercised on a leash	aggression, NA
	cbarq_aggression_17	When stared at directly by a member of	No aggression, Mild aggression, Moderate
		the household.	aggression, High aggression, Serious
			aggression, NA
	cbarq_aggression_18	Toward unfamiliar dogs visiting your	No aggression, Mild aggression, Moderate
		home.	aggression, High aggression, Serious
			aggression, NA
	cbarq_aggression_19	Toward cats, squirrels or other small	No aggression, Mild aggression, Moderate
		animals entering your yard.	aggression, High aggression, Serious
			aggression, NA
	cbarq_aggression_20	Toward unfamiliar persons visiting your	No aggression, Mild aggression, Moderate
		home.	aggression, High aggression, Serious
			aggression, NA

Table 1

Category of Variable	Variable Name	Question Text	Possible Response Values
	cbarq_aggression_21	When barked, growled, or lunged at by	No aggression, Mild aggression, Moderate
		another (unfamiliar) dog.	aggression, High aggression, Serious
			aggression, NA
	cbarq_aggression_22	When stepped over by a member of the	No aggression, Mild aggression, Moderate
		household.	aggression, High aggression, Serious
			aggression, NA
	cbarq_aggression_23	When you or a household member	No aggression, Mild aggression, Moderate
		retrieves food or objects stolen by the dog.	aggression, High aggression, Serious
			aggression, NA
	cbarq_aggression_24	Towards another (familiar) dog in your	No aggression, Mild aggression, Moderate
		household (leave blank if no other dogs).	aggression, High aggression, Serious
			aggression, NA
	cbarq_aggression_25	When approached at a favorite	No aggression, Mild aggression, Moderate
		resting/sleeping place by another	aggression, High aggression, Serious
		(familiar) household dog (leave blank if	aggression, NA
		no other dogs).	
	cbarq_aggression_26	When approached while eating by	No aggression, Mild aggression, Moderate
		another (familiar) household dog (leave	aggression, High aggression, Serious
		blank ifno other dogs).	aggression, NA

Table 1

Category of Variable	Variable Name	Question Text	Possible Response Values
	cbarq_aggression_27	When approached while playing	No aggression, Mild aggression, Moderate
		with/chewing a favorite toy, bone, object,	aggression, High aggression, Serious
		etc., by another (familiar) household dog	aggression, NA
		(leave blank ifno other dogs).	
C-BARQ Fear	cbarq_fear_1	When approached directly by an	No fear, Mild fear, Moderate fear, High
		unfamiliar adult while away from your	fear, Extreme fear, NA
		home	
	cbarq_fear_2	When approached directly by an	No fear, Mild fear, Moderate fear, High
		unfamiliar child while away from your	fear, Extreme fear, NA
		home	
	cbarq_fear_3	In response to sudden or loud noises (e.g.	No fear, Mild fear, Moderate fear, High
		vacuum cleaner, car backfire, road drills,	fear, Extreme fear, NA
		objects being dropped, etc.)	
	cbarq_fear_4	When unfamiliar persons visit your home	No fear, Mild fear, Moderate fear, High
			fear, Extreme fear, NA
	cbarq_fear_5	When an unfamiliar person tries to touch	No fear, Mild fear, Moderate fear, High
		or pet the dog.	fear, Extreme fear, NA
	cbarq_fear_6	In heavy traffic	No fear, Mild fear, Moderate fear, High
			fear, Extreme fear, NA

Table 1

Category of Variable	Variable Name	Question Text	Possible Response Values
	cbarq_fear_7	In response to strange or unfamiliar	No fear, Mild fear, Moderate fear, High
		objects on or near the sidewalk (e.g.	fear, Extreme fear, NA
		plastic trash bags, leaves, litter, flags	
		flapping, etc.)	
	cbarq_fear_8	When examined/treated by a	No fear, Mild fear, Moderate fear, High
		veterinarian.	fear, Extreme fear, NA
	cbarq_fear_9	During thunderstorms, firework displays,	No fear, Mild fear, Moderate fear, High
		or similar events.	fear, Extreme fear, NA
	cbarq_fear_10	When approached directly by an	No fear, Mild fear, Moderate fear, High
		unfamiliar dog of the same or larger size.	fear, Extreme fear, NA
	cbarq_fear_11	When approached directly by an	No fear, Mild fear, Moderate fear, High
		unfamiliar dog of a smaller size.	fear, Extreme fear, NA
	cbarq_fear_12	When first exposed to unfamiliar	No fear, Mild fear, Moderate fear, High
		situations (e.g. first car trip, first time in	fear, Extreme fear, NA
		elevator, first visit to veterinarian, etc.)	
	cbarq_fear_13	In response to wind or wind-blown	No fear, Mild fear, Moderate fear, High
		objects.	fear, Extreme fear, NA
	cbarq_fear_14	When having nails clipped by a household	No fear, Mild fear, Moderate fear, High
		member.	fear, Extreme fear, NA

Table 1

 $Data\ description\ for\ complete\ ManyDogs1\ project\ data\ (continued)$

Category of Variable	Variable Name	Question Text	Possible Response Values
	cbarq_fear_15	When groomed or bathed by a household	No fear, Mild fear, Moderate fear, High
		member.	fear, Extreme fear, NA
	cbarq_fear_16	When having his/her feet toweled by a	No fear, Mild fear, Moderate fear, High
		member of the household.	fear, Extreme fear, NA
	cbarq_fear_17	When unfamiliar dogs visit your home	No fear, Mild fear, Moderate fear, High
			fear, Extreme fear, NA
	cbarq_fear_18	When barked, growled, or lunged at by an	No fear, Mild fear, Moderate fear, High
		unfamiliar dog.	fear, Extreme fear, NA
	cbarq_separation_1	Shaking, shivering, or trembling	Never, Seldom, Sometimes, Usually,
			Always, Not observed, NA
	cbarq_separation_2	Excessive Salivation	Never, Seldom, Sometimes, Usually,
			Always, Not observed, NA
	cbarq_separation_3	Restlessness/agitation/pacing	Never, Seldom, Sometimes, Usually,
			Always, Not observed, NA
	cbarq_separation_4	Whining	Never, Seldom, Sometimes, Usually,
			Always, Not observed, NA
	cbarq_separation_5	Barking	Never, Seldom, Sometimes, Usually,
			Always, Not observed, NA

Table 1

Category of Variable	Variable Name	Question Text	Possible Response Values
	cbarq_separation_6	Howling	Never, Seldom, Sometimes, Usually,
			Always, Not observed, NA
	cbarq_separation_7	Chewing/scratching at doors, floor,	Never, Seldom, Sometimes, Usually,
		windows, curtains, etc	Always, Not observed, NA
	cbarq_separation_8	Loss of appetite	Never, Seldom, Sometimes, Usually,
			Always, Not observed, NA
C-BARQ	cbarq_excitability_1	When you or other members of the	No excitability, Mild excitability,
Excitability		household come home after a brief	Moderate excitability, High excitability,
		absence.	Extreme excitability, NA
	cbarq_excitability_2	When playing with you or other members	No excitability, Mild excitability,
		of your household.	Moderate excitability, High excitability,
			Extreme excitability, NA
	cbarq_excitability_3	When the doorbell rings.	No excitability, Mild excitability,
			Moderate excitability, High excitability,
			Extreme excitability, NA
	cbarq_excitability_4	Just before being taken for a walk	No excitability, Mild excitability,
			Moderate excitability, High excitability,
			Extreme excitability, NA

Table 1

Category of Variable	Variable Name	Question Text	Possible Response Values
	cbarq_excitability_5	Just before being taken on a car trip	No excitability, Mild excitability,
			Moderate excitability, High excitability,
			Extreme excitability, NA
	cbarq_excitability_6	When visitors arrive at your home.	No excitability, Mild excitability,
			Moderate excitability, High excitability,
			Extreme excitability, NA
C-BARQ	cbarq_attachment_1	Displays a strong attachment for one	Never, Seldom, Sometimes, Usually,
${\rm Attachment/Attention} -$	-	particular member of the household	Always, Not observed, NA
Seeking			
	cbarq_attachment_2	Tends to follow you (or other members of	Never, Seldom, Sometimes, Usually,
		household) about the house, from room to	Always, Not observed, NA
		room	
	cbarq_attachment_3	Tends to sit close to, or in contact with,	Never, Seldom, Sometimes, Usually,
		you (or others) when you are sitting down	Always, Not observed, NA
	cbarq_attachment_4	Tends to nudge, nuzzle or paw you (or	Never, Seldom, Sometimes, Usually,
		others) for attention when you are sitting	Always, Not observed, NA
		down	

Table 1

Category of Variable	Variable Name	Question Text	Possible Response Values
	cbarq_attachment_5	Becomes agitated (whines, jumps up, tries	Never, Seldom, Sometimes, Usually,
		to intervene) when you (or others) show	Always, Not observed, NA
		affection for another person	
	cbarq_attachment_6	Becomes agitated (whines, jumps up, tries	Never, Seldom, Sometimes, Usually,
		to intervene) when you show affection for	Always, Not observed, NA
		another dog or animal	
C-BARQ	cbarq_miscellaneous_1	Chases or would chase cats given the	Never, Seldom, Sometimes, Usually,
Miscellaneous		opportunity	Always, Not observed, NA
Bhavior Problems			
	cbarq_miscellaneous_2	Chases or would chase birds given the	Never, Seldom, Sometimes, Usually,
		opportunity	Always, Not observed, NA
	cbarq_miscellaneous_3	Chases or would chase squirrels, rabbits	Never, Seldom, Sometimes, Usually,
		and other small animals given the	Always, Not observed, NA
		opportunity	
	cbarq_miscellaneous_4	Escapes or would escape from home or	Never, Seldom, Sometimes, Usually,
		yard given the chance	Always, Not observed, NA
	cbarq_miscellaneous_5	Rolls in animal droppings or other	Never, Seldom, Sometimes, Usually,
		'smelly' substances	Always, Not observed, NA

Table 1

Category of Variable	Variable Name	Question Text	Possible Response Values
	cbarq_miscellaneous_6	Eats own or other animals' droppings or	Never, Seldom, Sometimes, Usually,
		feces	Always, Not observed, NA
	cbarq_miscellaneous_7	Chews inappropriate objects	Never, Seldom, Sometimes, Usually,
			Always, Not observed, NA
	cbarq_miscellaneous_8	Mounts' objects, furniture, or people	Never, Seldom, Sometimes, Usually,
			Always, Not observed, NA
	cbarq_miscellaneous_9	Begs persistently for food when people	Never, Seldom, Sometimes, Usually,
		are eating	Always, Not observed, NA
	cbarq_miscellaneous_10	Steals food	Never, Seldom, Sometimes, Usually,
			Always, Not observed, NA
	cbarq_miscellaneous_11	Nervous or frightened on stairs	Never, Seldom, Sometimes, Usually,
			Always, Not observed, NA
	cbarq_miscellaneous_12	Pulls excessively hard when on the leash	Never, Seldom, Sometimes, Usually,
			Always, Not observed, NA
	cbarq_miscellaneous_13	Urinates against objects/furnishings in	Never, Seldom, Sometimes, Usually,
		your home	Always, Not observed, NA
	cbarq_miscellaneous_14	Urinates when approached, petted,	Never, Seldom, Sometimes, Usually,
		handled or picked up	Always, Not observed, NA

Table 1

Category of Variable	Variable Name	Question Text	Possible Response Values
	cbarq_miscellaneous_15	Urinates when left alone at night, or	Never, Seldom, Sometimes, Usually,
		during the daytime	Always, Not observed, NA
	cbarq_miscellaneous_16	Defecates when left alone at night, or	Never, Seldom, Sometimes, Usually,
		during the daytime	Always, Not observed, NA
	cbarq_miscellaneous_17	Hyperactive, restless, has trouble settling	Never, Seldom, Sometimes, Usually,
		down	Always, Not observed, NA
	cbarq_miscellaneous_18	Playful, puppyish, boisterous	Never, Seldom, Sometimes, Usually,
			Always, Not observed, NA
	cbarq_miscellaneous_19	Active, energetic, always on the go	Never, Seldom, Sometimes, Usually,
			Always, Not observed, NA
	cbarq_miscellaneous_20	Stares intently at nothing visible	Never, Seldom, Sometimes, Usually,
			Always, Not observed, NA
	cbarq_miscellaneous_21	Snaps at (invisible) flies	Never, Seldom, Sometimes, Usually,
			Always, Not observed, NA
	cbarq_miscellaneous_22	Chases own tail/hind end	Never, Seldom, Sometimes, Usually,
			Always, Not observed, NA
	cbarq_miscellaneous_23	Chases/follows shadows, light spots, etc.	Never, Seldom, Sometimes, Usually,
			Always, Not observed, NA

Table 1

Category of Variable	Variable Name	Question Text	Possible Response Values
	cbarq_miscellaneous_24	Barks persistently when alarmed or	Never, Seldom, Sometimes, Usually,
		excited	Always, Not observed, NA
	cbarq_miscellaneous_25	Licks him/herself excessively	Never, Seldom, Sometimes, Usually,
			Always, Not observed, NA
	cbarq_miscellaneous_26	Licks people or objects excessively	Never, Seldom, Sometimes, Usually,
			Always, Not observed, NA
	cbarq_miscellaneous_27	Displays other bizarre, strange, or	Never, Seldom, Sometimes, Usually,
		repetitive behavior(s)	Always, Not observed, NA
Behavior Testing	status	Status of subject in experiment	Error (Experimental error invalidated
			session), Incomplete (Subject did not
			complete session, invalidating it),
			Included (Valid session used in analysis)
	first_condition	Which experimental condition was	Nonostensive, Ostensive
		experienced first	
	onecup	Warm-up trials with one cup	Proportion correct trials
	twocup	Warm-up trials with two cups	Proportion correct trials
	nonostensive	Nonostensive experimental trials	Proportion correct trials
	ostensive	Ostensive experimental trials	Proportion correct trials
	odor	Odor control trials	Proportion correct trials

Table 1

 $Data\ description\ for\ complete\ ManyDogs1\ project\ data\ (continued)$

Category of Variable Variable Name	Variable Name	Question Text	Possible Response Values
	right_side_ost	Right side correct in ostensive condition	Proportion of trials with right side correct
	right_side_nonost	Right side correct in nonostensive	Proportion of trials with right side correct
		condition	
	right_choice_ost	Right side chosen in ostenstive condition	Proportion of trials choosing right side
	right_choice_nonost	Right side chosen in nonostensive	Proportion of trials choosing right side
		condition
